

## Corporate Web Apps

### from Personal and Non-Corporate Managed Computers

BlackBerry® Access enables your users to securely access corporate on-prem or cloud resources, including BlackBerry Work, intranets, and cloud-based apps. Users can collaborate with these web apps remotely from their personal laptops — all without VPN or VDI. BlackBerry Access protects all data with Data Path Controls, which securely routes traffic through the firewall. At the same time, it keeps intranet and any SaaS data secure and containerized.

Users can now stay fully productive with access to the most popular corporate web applications, regardless of location.
